

ANOTHER FIRST: ECB GREEN ANTI-FRACTURE MEMBRANE

Since 1983, NAC Products have introduced many firsts in the flooring industry and we are proud to offer yet another! **ECB GREEN**, the first "GREEN" thin-bed, self-adhering, crack isolation membrane on the market! ECB Green is made up of a new recycled fabric topping, embedded into a strong, self-adhering back. ECB Green offers all the benefits and features of ECB Classic but can now be applied in LEED projects.

FEATURES AND BENEFITS

- Contributes to LEED points
- 3/8" Crack Isolation
- Exceeds ANSI A118.12 for Crack Isolation
- Exceeds ANSI A118.10 for Waterproof
- Self-bonding, easy to apply
- Eliminates cutting tile to meet control/cold joints
- No down time, can be walked and tiled on immediately
- Compatible with most tile installation materials

CERTIFICATION FOR LEED BUILDING

MR Credit 4.1 & 4.2 - Recycled Material

ECB Green is in the final stages of certification for recycled materials by Scientific Certification Systems. This means that after 9/1/09, ECB Green can be used on all LEED building projects that require crack isolation or waterproofing underlayments!

MR Credit 5.1 & 5.2 - Regional Materials

If you are within 500 mile radius of our manufacturing plant, you are eligible for LEED points for regional materials. Check out www.nacproducts.com for more information.

EQ Credit 4.1 & 4.2 - Low Emitting Materials

Both NAC TAC & NS-97 primers can be applied to LEED credit EQ 4.1 for low emitting materials. Our 101 Floor Prep has also been certified for LEED credit 4.2 for low emitting materials.

For more information about ECB Green and LEED certification, please contact Nick Duve at **800.633.4622** or go to the LEED section of our website at www.NACproducts.com
